

Quick. Safe. Lightweight. Cost-effective. Zero permeation.....

.....and dual containment!

Wouldn't it be nice to have a pipework system like that?

You can! Petrofuse ZP is the new DIBt-approved pipework system for use on petrol forecourts. The **only** DIBt approved alternative to steel.

Petrofuse ZP is a fully welded, double walled, rigid pipeline system. The inner product line is aluminium - lightweight, impermeable, with excellent flow characteristics. The protective outer wall is high density polyethylene - rugged, safe, electrofusion welded.

Trialled on sites throughout Germany by Aral, Petrofuse ZP is now available to all operators. Unlike a condom, Petrofuse ZP is fully conductive and multi-fuel compatible. Unlike two condoms, Petrofuse ZP's interstitial gap is actively monitored with a system that can automatically communicate with engineers by email or SMS.

Petrofuse ZP-safer than two condoms-but only available in black.
